

Summary Report of Work Completed on Day 3

☐ **Database Creation and Purpose**

A database was created to organize and retrieve information efficiently. The data was categorized based on agendas, such as general discussions and project-specific topics. Within the project categories, further classifications were made, for instance, relating to agendas like PDC extensions or cost enhancements. This structure helped streamline data management and retrieval.

☐ **Retrieving Text from PDF and Image Files**

I explored options to integrate data extraction from both PDF and image files. If it proved feasible, I planned to implement this functionality directly into the system, ensuring seamless access to textual information from various file formats.

☐ **Conference Paper Submission**

For the conference paper, I actively searched for relevant conferences that aligned with the research interests of the current project. Should any organization resonate with the work being conducted, I considered submitting the paper to such conferences.
